#### Search Notes

Examiner Brown,

Here are the results of the search you requested.

Please feel free to contact me if you have any questions.

**Edward Hart**

PTM: O-n-octanoylation is essential for activity (By similarity).
SIMILARITY: Belongs to the motilin family.
                                                               89

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Mouse mRNA
Event=Alternative splicing; Named isoforms=2;
Name=1; Synonyms=Ghrelin;
IsoId=Q9EQXO-1; Sequence=Displayed;
Name=2; Synonyms=del-Ginl4-ghrelin;
IsoId=Q9EQXO-2; Sequence=VSP_003246;
IsoId=Q9EQXO-2; Sequence=VSP_003246;
ISOID=SPECIFICITY: Mainly expressed in the gastrointestinal tract with higher levels in the stomach, medium levels in the duodenum, jejunum, ileum and colon. Low expression in the testis and brain.
Not detected in the salivary gland, pancreas, liver and lung.
DEVELOPMENTAL STAGE: Levels of n-octanoylated and n-decanoylated
                                                                                                                                                                                                                                                     growth regulation.

PTM: O-n-octanoylation is essential for activity (By similarity) The O-n-decanoylated form ghrelin-Cl0 differs in the length of the carbon backbone of the carboxylic acid bound to Ser-26. SIMILARITY: Belongs to the motilin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      24

Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation.

SUBCELLUIAR LOCATION: Secreted.

Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).

SUBCELLULAR LOCATION: Secreted (By similarity).

PTM: O-n-octanoylation is essential for activity (By similarity SIMILARITY: Belongs to the motilin family.

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the

salt, active at growth-hormone secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS receptor and for stimulating growth hormone secretion. Ghrelin agonist is utilised for treating a growth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or females, facilitating a weight gain, maintenance of weight, maintenance of physical functioning, recovery of physical function, and/or appetite increase, or appetite increase is particularly useful for a patient having a disease or disorder, or under going a treatment, accompanied by eight loss such as anorexia, bulinia, cancer cachexia, acquired immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail elderly and examples of treatments accompanied by weight loss include chemotherapy, radiation therapy, temporary or permanent immobilisation
                                                                                                                                                                                                                                                                                                                   Truncated ghrelin analogs active at growth-hormone secretagogue receptor useful for diagnosing or treating diseases such as anorexia, bulimia, cancer, obesity, diabetes mellitus, hypertension, osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention
                                                                                                                                                                                                                                                                                   Example 4; Page 34; 37pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      loss, appetite decrease, weight maintenance, treat obesity, diabetes and complications of diabetes including retinopathy, and/or cardiovascular disorders, where excessive weight is a contributing factor to different disease including hypertension, diabetes, dyslipidemias, cardiovascular disease, gall stones, osteoarthritis and certain forms of cancers, and bringing about a weight loss can be used for e.g. to reduce the likelihood of such diseases and for treating such diseases. Ghrelin analogue induces growth hormone release from primary-culture pituitary cells in a dose-dependent manner without stimulating the release of other pituitary hormones. Unlike longer length ghrelin, ghrelin analogue can be synthesised easily and has increased solubility in physiological buffers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
```

The invention relates to the use of ghrelin or its analogues for the treatment of diseases associated with undernutrition such as anorexia, and also relates to the use of ghrelin antagonists for the prevention or treatment of obesity. The invention additionally discloses a method for screening ghrelin agonists or antagonists by measuring the amount of food intake, neuropeptide Y (NPY) expression, binding of NPY to NPY receptor Y1, oxygen consumption, gastric emptying, or activity of the vagus nerve. Intracerebroventricular (ICV) administration of ghrelin in animals was

Ghrelin and its analogues may therefore be used to treat conditions such as loss of appetite, anorexia, cachexia, malignant diseases, and weight loss associated with infection or inflammatory diseases. Conversely, ghrelin antagonists may be used in the treatment of obesity. The present sequence represents human ghrelin which is referred to in the disclosure of the
                                                                                                                                                          This sequence represents unacylated ghrelin which may be used in the composition of the invention for preventing and/or reducing post-prandial induction of insulin resistance. The composition is useful for reducing post-prandial induction of insulin resistance, preventing and/or reducing dawn phenomenon in type I diabetes patient, reducing body weight increased in a patient suffering from at least one of type II diabetes and syndrome X, facilitating treatment of a insulin resistant patient, decreasing fat mass in a growth hormone deficient patient or in an aging patient having a high body mass index, or preventing and/or reducing insulin resistance in a patient in severe catabolism. Ghrelin is also useful for preparing a medicament for providing the above mentioned effects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Composition for preventing and/or reducing post-prandial induction of insulin resistance, preventing and/or reducing dawn phenomenon in type diabetes patient, comprising unacylated ghrelin, or its analog or salt.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2003-569115/53.

                                                                                                                                                                                                                                                                                                       preparing a composition
```

This invention relates to a novel albumin fusion protein having albumin or biological activity. Human serum albumin is responsible for a significant proportion of the osmotic pressure of serum and also functions as a carrier of endogenous and exogenous ligands. The fusion of albumin to a therapeutic protein may increase shelf-life and stability of the therapeutic protein. The albumin fusion protein of the invention may allow production of compositions with antidiabetic activity whilst the nucleotide sequence which encodes it may be useful for gene therapy. The albumin fusion protein is useful for preparing a composition for treating albumin fusion protein is useful for preparing a therapeutic protein diabetes mellitus. The present sequence is that of a therapeutic protein

                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a new composition comprising: (1) a core particle with at least one first attachment site; and (11) at least one antigen or antigenic determinant with at least one second attachment site, where the antigen or antigenic determinant is ghrelin or a ghrelin peptide, and where the second attachment site being consisting of an attachment site not naturally occurring with the antigen or antigenic determinant and an attachment site naturally occurring with the antigen or antigenic determinant, where the second attachment site is capable of association to the first attachment site, and where the ghrelin or a ghrelin peptide and the core particle interact through the association to form an ordered and repetitive antigen array. The composition is useful for treating obseity. The repetitive array may form part of a phage or the certain of the composition array and the composition of a phage or the certain of the composition array.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising a core particle having a first attachment site and an antigen or antigenic determinant which is a ghrelin or ghrelin peptide having a second attachment site, useful for treating obesity.

                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel method for producing protected or modified peptide fragments containing desired sequences of amino acids and/or non-amino acids, at least one of which is suitably protected for preparing the peptide fragment with use of a weakly acidic coindinating resin to enable cleavage from the resin under weakly acidic conditions. The method of the invention may be used for producing modified peptide fragments or proteins and producing protected peptide fragments that do not contain any modified (non-) amino acids for application as drugs. The current sequence is that of a Ghrelin-related growth hormone secretagogue peptide of the invention.
                                                                                                                                                                                                                                                                                                                          Sequence 28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Producing modified peptides or proteins with physiological activity comprises fusing side chain-modified peptide fragments obtained by phase synthesis and non-modified peptides by genetic modification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Minamitake Y,

The invention relates to a collection of capture compounds capable of CC binding to biomolecules to form complexes that are stable under mass CC spectrometry conditions. The formulae for the capture compounds comprises CC sets of compounds of formula (I)-(III) given in the specification. Also cincluded are analysis of biomolecules (by contacting a composition and comprising a biomolecule), separating protein conformers (by CC contacting a composition comprising a biomolecule with the above collection and identifying or CC detecting bound biomolecule), separating protein conformers (by CC contacting a composition comprising a biomolecule with the above CC collection, separating the members of the collection and identifying CC bound proteins), reducing diversity of a complex mixture of biomolecules (by contacting the mixture with the above collection and separating each set of complexes of capture compounds with biomolecules from the other CC sets) and identifying phenotype-specific biomolecules (by sorting cells CC from a single subject into sets according to a phenotype, contacting CC mixtures of biomolecules from each set with the above collection and CC comparing the patterns of biomolecule binding from each set). The CC collection of capture compounds is useful for the analysis of proteome), using mass spectrometry, especially matrix assisted laser desorption ionisation compound of the invention.

Disclosure; SEQ ID NO 62; 368pp; English

This sequence represents a growth hormone secretagogue which was used in the preventive or therapeutic agent of hepatopathy of the invention. The therapeutic agent has activity which raises intracellular calcium ion concentration by binding with growth hormone secretion inducer receptor (GHS-R) and comprises a polypeptide which raises the intracellular calcium ion concentration by binding with GHS-R or its salt as an active ingredient. The therapeutic agent of the invention is useful for preventing or treating hepatopathy such as hepatitis, liver cirrhosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for identifying drug non-target biomolecules in a mixture of biomolecules. The method comprises interacting mixture with capture compounds having moiety X which covalently binds to biomolecules with high affinity, moiety Y that increases selectivity of binding so that the capture compound binds to fewer biomolecules, and moiety Z for presenting X and Y, and analysing captured biomolecules to identify drug non-targets. The capture compound also optionally comprises a sorting function moiety Q and or a solubility function moiety W. The selectivity function moiety Y serves to modulate the reactivity function by reducing the number of groups to which the reactivity function moiety X bind, such as by steric hindrance and other interactions. Y is optionally a peptide ligand (ADR42112-ADR42256).
                                                                                                                                                                                                                                                                                                                                                                        Preventive or therapeutic agent of hepatopathy such as hepatitis or cirrhosis, comprises polypeptide having activity that raises intracellular calcium ion concentration by binding with growth hormo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Calcium ion; concentration; growth hormone; secretion inducer receptor; GHS-R; hepatitis; liver cirrhosis; liver failure; viral hepatitis; alcoholic hepatitis; drug induced hepatitis; autoimmune hepatitis; recover; liver figure induced hepatitis; autoimmune hepatitis; recover; liver figure figures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 28

The method of treatment involves administering the agent
                        for a target substrate for preparing a medicament for the treatment of a specific disease related to the target substrate. The invention also relates to a pharmaceutical or diagnostic composition comprising one or more enzymes in the use cited, optionally comprising pharmaceutically or diagnostically acceptable carriers, excipients and/or auxiliary agents, a method for cleaving a target substrate in vivo or in vitro comprising contacting the target substrate with a protease as cited in the use mentioned, and a method for treatment of a disease in a patient connected
                                                                                                                                                                                                                                                                                                                              Claim 34;
                                                                                                                                                                                                                                                                                                                                                                                  Proteases with defined specificity for a target substrate useful treating a specific disease related to the target substrate, such cancer, asthma, diabetes, inflammatory disorders and psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Haupte U,

CC The protease hydrolyzes the target substrate and eliminates or reduces

CC one or more biological activities, physico-chemical properties or

CC pharmacological properties of the target protein and/or activates or

CC or pharmacological properties of the target protein, and/or adds one or

CC or pharmacological properties of the target protein, and/or adds one or

CC or pharmacological properties to the target protein. The protease may be

CC administered to treat immune disorders, inflammatory disorders,

CC musculoskeletal diseases, dermatological diseases, gastrointestinal

CC diseases, endocrine diseases, metabolic disorder, cancers, hematological

Cd diseases, cardiovascular diseases, neurological diseases,

CC neurodegenerative diseases, growth disorders, respiratory diseases,

CC genitourinary diseases, gynecological disorders, mutritional disorders

CC genitourinary diseases, gynecological disorders, mutritional disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes the use of a secretagogue compound (C1) for the preparation of a medicament for the prophylaxis or treatment of cancer CC cachexia in an individual in need of such treatment. Also described are: CC a shrelin-like compound of formula (I) as mentioned above; a cc described above, or its salt, and carriers, vehicles and/or exciptents; a cc medical packaging (MP) comprising one or more dosage units of PC; committoring the effect of a treatment of an individual with C1, involving cachexis, and carriers, vehicles and/or exciptents; a cc measuring the blood level in the individual of IGF-1 (insulin like growth factor 1), IGFBP-3 (insulin-like growth factor binding protein 3) and/or CC ALS (Acetolactate synthase); and preventing or treating cachexia, CC involves administering to an individual C1 and an effective amount of a CC involves administering to an individual. C1 and an effective amount of a creatment. The cancer cachexia is caused by a catabolic disorder or cancerment. The cancer cachexia is caused by a catabolic disorder or lung cancer, pancreatic cancer, liver cancer and gastrointestinal tract CC cancers. C1 is useful in treating or preventing cancer cachexia that CC leads to stimulation of appetite, stimulation of food intake, stimulation of weight maintenance, and/or increased body fat mass. C1 is useful in preventing or treatment. The antineoplastic combination with an anti-neoplastic treatment. The antineoplastic combination with an anti-neoplastic treatment. The antineoplastic combination of relatively or chemotherapy. This is the amino acid combination of a bunnan obrelin-like compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                          The specification describes a monoclonal antibody that specifically binds human ghrelin at an epitope localized to amino acids 4-20. The complementarity determining regions (CDRs) of such antibodies are used to construct chimeric or humanized antibodies. Pharmaceutical compositions comprising the antibody of the invention are useful for treating or preventing obesity, or a related disorder such as non-insulin dependent diabetes mellitus, Prader-Willi syndrome, eating disorders, hyperphagia, impaired satiety, anxiety, gastric motility disorders, cancer and cardiovascular disorders. The present sequence represents human ghrelin.
                                                                                                                                                                                                                                                                                                                                                                                                                         New anti-human ghrelin (hGhrelin) monoclonal antibody, useful for treating or preventing obesity or a related disorder e.g., non-insulin dependent diabetes mellitus, Prader-Willi syndrome, eating disorders, and
